Omega-3 fatty acids, particularly EPA/DHA, help maintain healthy blood triglyceride levels and support healthy cardiovascular, cognitive, and joint function. They also support healthy vision and youthful skin and are important for proper fetal growth during pregnancy.* Fish oil is a rich source of these key omega-3 fatty acids.

Core Omega-3 is from fish sourced from cold Atlantic waters, considered the purest and richest fish oil source on the planet. One serving provides a similar amount of omega-3 fatty acids as an average serving of salmon.
